We are only addressing areas that have PCB, Total greater or equal to 1 mg/kg PCB. Within those grids we will address the contaminants that are within those grids.

Contaminant	Cleanup Level
PCB (Total):	< 1mg/kg
Arsenic:	< 20 mg/kg*
Cobalt:	< 23 mg/kg*
Copper	< 3,100 mg/kg*
Lead:	< 400 mg/kg*
Manganese:	< 1,800 mg/kg*
Benzo(a)anthracene:	< 11 mg/kg*
Benzo(a)pyrene:	< 1.1 mg/kg*
Benzo(b)fluoranthene:	< 11 mg/kg*
DiBenzo(a,h)anthracene:	< 1.1 mg/kg*
Indeno(1,2,3-cd)pyrene:	< 11 mg/kg*

*The EPA will be addressing areas with analytical results above or equal to 1 mg/kg total PCBs. Areas with analytical results that exceed site-specific action levels for PAH and metals will also be addressed if they are co-located with levels of total PCBs that are above or equal to 1 mg/kg. The soils at the Site will be excavated to maximum depth of two (2) feet below ground surface.

Good Morning Gary,

Are the removal action levels the same for FJ Doyle as for Henryetta? If they're the same, we can produce an action level comparison spreadsheet for Jason to complete the map request.

Let me know and we'll get to it.

Sean Gavlas

Sean:

Can I get you guys to rework this map? What I need is the following:

1. Highlight the PCB Grids (1 or greater); Already done in map above – just confirm
2. Highlight the TSCA grids (50 or greater): DRA08, EAS06, EAS07, FJD03-06, FJD04-02, FJD04-04, FJD04-07, FJD04-08 (Assume that if the grid is TSCA, it is TSCA to clean)
3. Some Cross Hatch Scheme for Excavation Depth (ex. 0-6, 6-12, 12-18, 18-24, 24 – 36): 0-1 will be considered 0-6

I am hoping you can get this to me tomorrow.

Thanks
